### CORTEN STEEL EDGING

#### Description:

High strength S355 steel. CORTEN style steel delivered as raw black steel. Thanks to the improved atmospheric corrosion resistance of the steel, the edging will form a rust like protective layer on the surface over 18 to 36 months. The surface oxidation forms without attacking the structural integrity of the steel and hence the edging will retain its strength and form. Rust run off from the steel is minimized as the weathering process stabilizes.

#### Advantages :

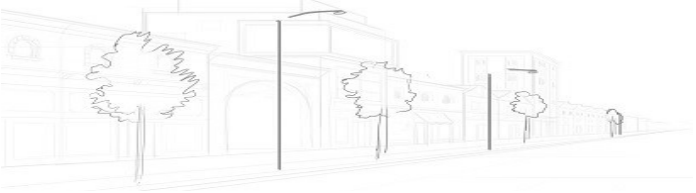

- 3mm thick steel for hard landscaping and heavy loads.
- Long life span and resistant.
- To be sealed in concrete or anchored into the ground
- Ideal for the separation of two hard surfaces
- Easy to install
- 1 double coupler and 2 anchoring pegs supplied with each edge
- Optional accessories : single couplers and anchoring pegs customizable between 0 and 3 per each 3m lengths.

#### Applications:

- Paving
- Concrete
- Tarmacadam
- Resin bound gravel
- Heavy duty amenity
